

Environmental Science Pacing Guide

Units	Standards	Duration (Weeks)
<p>1. Organization of the Environment and Biomes</p> <p>IndexA</p> <p>IndexB</p>	<p>SEV1. Obtain, evaluate, and communicate information to investigate the flow of energy and cycling of matter within an ecosystem.</p> <p>a. Develop and use a model to compare and analyze the levels of biological organization including organisms, populations, communities, ecosystems, and biosphere.</p> <p>d. Evaluate claims, evidence, and reasoning of the relationship between the physical factors (e.g., insolation, proximity to coastline, topography) and organismal adaptations within terrestrial biomes.</p> <p>e. Plan and carry out an investigation of how chemical and physical properties impact aquatic biomes in Georgia. (Clarification statement: Consider the diverse aquatic ecosystems across the state such as streams, ponds, coastline, estuaries, and lakes.)</p>	<p><u>6 weeks</u></p> <p><u>10 days</u>: levels of organization</p> <p><u>4 days</u>: species diversity</p> <p><u>10 days</u>: biomes and ecosystems</p> <p><u>3 days</u>: review and remediation</p> <p><u>2 weeks</u>: Edgenuity</p>

Environmental Science Pacing Guide

<p>2. Populations and Changes in the Ecosystem</p> <p>Index</p>	<p>SEV5. Obtain, evaluate, and communicate information about the effects of human population growth on global ecosystems.</p> <ol style="list-style-type: none"> a. Construct explanations about the relationship between the quality of life and human impact on the environment in terms of population growth, education, and gross national product. b. Analyze and interpret data on global patterns of population growth (fertility and mortality rates) and demographic transitions in developing and developed countries. <p>SEV2. Obtain, evaluate, and communicate information to construct explanations of stability and change in Earth’s ecosystem</p> <ol style="list-style-type: none"> c. Construct an argument to predict changes in biomass, biodiversity, and complexity within ecosystems, in terms of ecological succession. d. Construct an argument to support a claim about the value of biodiversity in ecosystem resilience including keystone, invasive, native, endemic, indicator, and endangered species. 	<p>4 weeks</p> <p><u>16 days</u>: Edgenuity</p> <p><u>4 days</u>: population and demographics</p>
<p>3. Matter and Energy in Ecosystems</p> <p>Index</p>	<p>SEV1. Obtain, evaluate, and communicate information to investigate the flow of energy and cycling of matter within an ecosystem.</p> <ol style="list-style-type: none"> b. Develop and use a model based on the Laws of Thermodynamics to predict energy transfers throughout an ecosystem (food chains, food webs, and trophic levels). (Clarification statement: The first and second law of thermodynamics should be used to support the model.) c. Analyze and interpret data to construct an argument of the necessity of biogeochemical cycles (hydrologic, nitrogen, phosphorus, oxygen, and carbon) to support a sustainable ecosystem. 	<p>5 weeks</p> <p>10 days: Edgenuity</p> <p>2 days: Food Chains</p> <p>3 days: Food Webs</p> <p>5 days: Biogeoche Cycles</p> <p>3 days: Energy Pyramid</p>

Environmental Science Pacing Guide

<p>4. The Atmosphere and Climate</p> <p>Index</p>	<p>SEV2. Obtain, evaluate, and communicate information to construct explanations of stability and change in Earth's ecosystems.</p> <ul style="list-style-type: none">a. Analyze and interpret data related to short-term and long-term natural cyclic fluctuations associated with climate change. (Clarification statement: Short-term examples include but are not limited to El Niño and volcanism. Long-term examples include but are not limited to variations in Earth's orbit such as Milankovitch cycles.)b. Analyze and interpret data to determine how changes in atmospheric chemistry (carbon dioxide and methane) impact the greenhouse effect. <p>SEV4. Obtain, evaluate, and communicate information to analyze human impact on natural resources.</p> <ul style="list-style-type: none">a. Construct and revise a claim based on evidence on the effects of human activities on natural resources. Human Activities: Agriculture Forestry Ranching Mining Urbanization Fishing Water use Pollution Desalination Waste water treatment. Natural Resources : Land Water Air Organismsb. Design, evaluate, and refine solutions to reduce human impact on the environment including, but not limited to, smog, ozone depletion, urbanization, and ocean acidification. <p>SEV5. Obtain, evaluate, and communicate information about the effects of human population growth on global ecosystems.</p> <ul style="list-style-type: none">c. Construct an argument from evidence regarding the ecological effects of human innovations (Agricultural, Industrial, Medical, and Technological Revolutions) on global ecosystems.	<p>3 weeks</p> <p>10 days: Edgenuity</p> <p>5 days: Weather and Air Pollution</p>

Environmental Science Pacing Guide

<p>5. Human uses of Land</p> <p>Index</p>	<p>SEV4. Obtain, evaluate, and communicate information to analyze human impact on natural resources.</p> <p>a. Construct and revise a claim based on evidence on the effects of human activities on natural resources. Human Activities: Agriculture Forestry Ranching Mining Urbanization Fishing Water use Pollution Desalination Waste water treatment. Natural Resources : Land Water Air Organisms</p> <p>SEV5. Obtain, evaluate, and communicate information about the effects of human population growth on global ecosystems.</p> <p>Construct an argument from evidence regarding the ecological effects of human innovations (Agricultural, Industrial, Medical, and Technological Revolutions) on global ecosystems.</p>	<p>4 weeks</p> <p>16 days: Edgenuity</p> <p>4 days: Food, Ag, and Land</p>
<p>6. Human Impact on Water Resources</p> <p>Index</p>	<p>SEV4. Obtain, evaluate, and communicate information to analyze human impact on natural resources.</p> <p>a. Construct and revise a claim based on evidence on the effects of human activities on natural resources. Human Activities: Agriculture Forestry Ranching Mining Urbanization Fishing Water use Pollution Desalination Waste water treatment. Natural Resources : Land Water Air Organisms</p> <p>SEV5. Obtain, evaluate, and communicate information about the effects of human population growth on global ecosystems.</p> <p>Construct an argument from evidence regarding the ecological effects of human innovations (Agricultural, Industrial, Medical, and Technological Revolutions) on global ecosystems.</p>	<p>4 weeks</p> <p>10 days: Edgenuity</p> <p>10 days: water conservation and pollution</p>

Environmental Science Pacing Guide

<p>7. Understanding Natural Resources</p> <p>Index</p>	<p>SEV3. Obtain, evaluate, and communicate information to evaluate types, availability, allocation, and sustainability of energy resources.</p> <ul style="list-style-type: none">a. Analyze and interpret data to communicate information on the origin and consumption of renewable forms of energy (wind, solar, geothermal, biofuel, and tidal) and non-renewable energy sources (fossil fuels and nuclear energy)b. Construct an argument based on data about the risks and benefits of renewable and nonrenewable energy sources. (Clarification statement: This may include, but is not limited to, the environmental, social, and economic risks and benefits.)c. Obtain, evaluate, and communicate data to predict the sustainability potential of renewable and non-renewable energy resources.d. Design and defend a sustainable energy plan based on scientific principles for your location. <p>SEV5. Obtain, evaluate, and communicate information about the effects of human population growth on global ecosystems.</p> <ul style="list-style-type: none">c. Design and defend a sustainability plan to reduce your individual contribution to environmental impacts, taking into account how market forces and societal demands (including political, legal, social, and economic) influence personal choices.	<p>3 weeks</p> <p>7 days: Edgenuity</p> <p>3 days: Nonrenewable Resources</p> <p>4 days: Renewable Resources</p>

Environmental Science Pacing Guide

<p>8. The Environment and Society</p> <p>Index</p>	<p>SEV3. Obtain, evaluate, and communicate information to evaluate types, availability, allocation, and sustainability of energy resources.</p> <p>a. Analyze and interpret data to communicate information on the origin and consumption of renewable forms of energy (wind, solar, geothermal, biofuel, and tidal) and non-renewable energy sources (fossil fuels and nuclear energy)</p> <p>b. Construct an argument based on data about the risks and benefits of renewable and nonrenewable energy sources. (Clarification statement: This may include, but is not limited to, the environmental, social, and economic risks and benefits.)</p> <p>c. Obtain, evaluate, and communicate data to predict the sustainability potential of renewable and non-renewable energy resources.</p> <p>d. Design and defend a sustainable energy plan based on scientific principles for your location.</p> <p>SEV5. Obtain, evaluate, and communicate information about the effects of human population growth on global ecosystems.</p> <p>c. Design and defend a sustainability plan to reduce your individual contribution to environmental impacts, taking into account how market forces and societal demands (including political, legal, social, and economic) influence personal choices.</p>	<p>3 weeks</p> <p>13 days: Edgenuity</p> <p>2 days: Social Influences</p>
